Paderborn Germany, May 20, 2015

COMPRION first to offer new validated GSMA Handset Test Book tests

The test solution provider COMPRION is the first to provide new test cases covering the GSMA Handset Test Book requirements for their UT³ Platform conformance test system. Hajo Sandschneider, Director of Marketing and Product Management at COMPRION explains: "These are conformance tests for mobile phones supporting features such as Secure Element API (including SEAC), Android specific API, Multiple Card Emulation Environments, NFC Service remote administration as well as NFC tag reading and writing."

COMPRION is the test tool provider offering the highest number of test cases for NFC related work items. Sandschneider states "We cover hundred percent of the tests identified as first priority by GCF. This means that companies that want to be fully compliant to the GSMA NFC Handset Test Book can only rely on COMPRION."

The GSMA Handset Test Book is driven by mobile network operators. They aim to make sure that handsets support a defined set of NFC-related features and are interoperable with corresponding contactless devices.

About COMPRION

COMPRION is the worldwide leading manufacturer of test solutions for terminals and smart cards covering contact-based and contactless technologies. Our standardization activities enable us to integrate the latest standards into our products. As COMPRION systems are renowned for precise measurement capabilities, the company serves all top handset, card, chipset manufacturers, mobile network operators, and test houses.
